Make I.T Good Sustainability Policy

Our aims

We want to help the environment, protect and look after precious resources and stop so much waste going to landfill. We believe that, wherever possible, there is a need to look after our world and make it easier for businesses to do this, too.

We practice this and apply it to every area of our business and relay it to our team as well.

Our beliefs

We believe that most if not all materials can be and should be recyclable wherever possible. We believe that we can help businesses large and small to achieve this.

However, we understand that our team's business operations may impact on the environment and are aware of the need to reduce our own impact.
We are developing all the time and achieve this by:

Helping more businesses to recycle and reuse their I.T equipment.
Educating businesses, charities and organisations about reducing their impact on the environment.

Ensuring we take a proactive and flexible approach to meeting and exceeding legal requirements and regulations.
Ensuring all staff are aware of Make I.T Good's sustainability policy and providing regular training around this.

Ensuring the team complies with all relevant legislation and regulation to ensure best possible environmental practice and compliance.
